Credits:	5
Level:	Middle
Medium of instruction:	Bilingual
Offering School:	School of Arts and Social Sciences

This course aims to offer visions and treatments of the future through studying the great visionary film masters and their sci-fi films and animations about the future. Looking to “the future” is one way to meet our curiosity with questions and answers about the past and present. This course is not just about the future but also about the present conditions of our civilization through films about the future. As French philosopher Simone Weil puts it: “*The future is made of the same stuff as the present.*” From Melies’ 1902 “*Trip to the Moon*” to Kubrick’s 2001 “*Space Odyssey*”, in which human has finally broken the speed of light barrier, this course covers the important science fiction films and offers a deep and reflective exploration of human issues, social conditions and technological development through these films about the future.

"We all want to escape occasionally. But science fiction is often very far from escapism, in fact you might say that science fiction is escape into reality... It's a fiction which does concern itself with real issues: the origin of man; our future. In fact I can't think of any form of literature which is more concerned with real issues, reality." - Arthur C Clarke

This course re-examines the developing historical timeline of human issues and also offers an opportunity for students to use their imagination to create their own vision of the future in short story synopsis.
